# Class Design (Mappings)

# Service Interface

**<<interface>>  
IUserService**

- signIn(User user): User
- signOut(User user): User
- changePassword(long id, User user): User

**<<interface>>  
ICustomerService**

- addCustomer(Customer customer): Customer
- removeCustomer(long custId): Customer
- updateCustomer(long custId, Customer customer): Customer
- getCustomer(long custId): Customer
- getAllCustomers(): List<Customer>

**<<interface>>  
IAccountService**

- addAccount(Account account): Account
- removeAccount(long id): Account
- updateAccount(long id, Account account): Account
- getAccount(long id): Account
- getAllAccounts():List<Account>

**<<interface>>  
ICreditCardService**

- addCreditCard(CreditCard creditCard): CreditCard
- removeCreditCard(long cardId): CreditCard
- updateCreditCard(long cardId, CreditCard card):CreditCard
- getCreditCard(long cardId): CreditCard
- getAllCreditCards(): List<CreditCard>

**<<interface>>  
IPaymentService**

- addPayment(Payment payment): Payment
- removePayment(long id): Payment
- updatePayment(long id, Payment payment): Payment
- getPayment(long id) : Payment

**<<interface>>  
ITransactionService**

- addTransaction(Transaction transaction): Transaction
- removeTransaction(long id): Transaction
- updateTransaction(long id, Transaction transaction): Transaction
- getTransactionDetails(long id):Transaction
- getAllTransactions(): List<Transactions>

**<<interface>>  
IStatementService**

- addStatement(Statement statement): Statement
- removeStatement(long id): Statement
- updateStatement(long id, Statement statement): Statement
- getStatement(long id): Statement
- getAllStatements(): List<Statement>
- getBilledStatement(): Statement
- getUnbilledStatement(): Statement

# Repository

**<<interface>>  
IUserRepository**

- signIn(User user): User
- signOut(User user): User
- changePassword(long id, User user): User

**<<interface>>  
ICustomerRepository**

- addCustomer(Customer customer): Customer
- removeCustomer(long custid): Customer
- updateCustomer(long custid, Customer customer): Customer
- getCustomer(long custid): Customer
- getAllCustomers(): List<Customer>

**<<interface>>  
IAccountRepository**

- addAccount(Account account): Account
- removeAccount(long id): Account
- updateAccount(long id, Account account): Account
- getAccount(long id): Account
- getAllAccounts(): List<Account>

**<<interface>>  
ICreditCardRepository**

- addCreditCard(CreditCard creditCard): CreditCard
- removeCreditCard(long cardId): CreditCard
- updateCreditCard(long cardId, CreditCard card): CreditCard
- getCreditCard(long cardId): CreditCard
- getAllCreditCards(): List<CreditCard>

**<<interface>>  
IPaymentRepository**

- addPayment(Payment payment): Payment
- removePayment(long id): Payment
- updatePayment(long id, Payment payment): Payment
- getPayment(long id): Payment

**<<interface>>  
ITransactionRepository**

- addTransaction(Transaction transaction): Transaction
- removeTransaction(long id): Transaction
- updateTransaction(long id, Transaction transaction): Transaction
- getTransactionDetails(long id): Transaction
- getAllTransactions(): List<Transactions>

**<<interface>>  
IStatementRepository**

- addStatement(Statement statement): Statement
- removeStatement(long id): Statement
- updateStatement(long id, Statement statement): Statement
- getStatement(long id): Statement
- getAllStatements(): List<Statement>
- getBilledStatement(): Statement
- getUnbilledStatement(): Statement

## Extra Functionality

1. Generating Pdf for the billed and unbilled statements.
2. Generating Pdf if the customer wants to see the details of all successful transactions.
3. Sending email with an attachment.
4. Performing Junit testing using mockito.
5. Performing global and custom exception handling as per requirements.
6. Performing validation on required fields.
7. Custom Queries has been added to automate and enhance the functionalities of transaction and statement.
